The British Columbia Trade and Investment Office

The British Columbia Trade and Investment Office (BCTIO), an agency of the provincial government, provides one-stop access for both investors and exporters.

The BCTIO focuses on advancing investment opportunities, fostering industry development and enhancing trade in British Columbia's goods and services.

The BCTIO assists investors and exporters by:

- informing investment and export proponents about potential joint venture partners, consultants, sources of capital and industrial land locations;
- identifying and accelerating the development of key private sector investment projects;
- providing information on government policies, programs and regulatory requirements;
- establishing contacts and arranging meetings between our clients, regulators and decision makers;
- coordinating projects and sectoral opportunities that have both trade and investment components; and
- serving as a link with other provincial and federal government departments and agencies involved in trade and investment activities.

Health is a key sector of British Columbia's economy. For further information on British Columbia expertise in the health sector, contact:

Health Care and Special Needs Facility Development

The Canadian health care system is recognized as one of the best in the world and has been the focus of growing attention by other countries. British Columbia is well positioned to help these countries address the many similar challenges associated with the increased health needs of their populations.

Worldwide, countries are experiencing the effects of an aging population and many are introducing long-term care programs to ensure there are dedicated resources to take care of their elderly and chronically ill. British Columbia has extensive experience in this area, having introduced a comprehensive, provincewide program of continuing care in 1978.

British Columbia companies, and their public sector partners, are experts in health policy and program development, and in the planning, design, construction, commissioning, operation and administration of health care and medical facilities.

In addition to institutional facilities, British Columbia is developing innovative residential supportive housing developments for our seniors and for persons with disabilities. Many of these developments incorporate "aging in place" and "barrier free" design features.

British Columbia architectural planning firms have extensive experience in health facility planning and design. These firms, along with the consulting engineering, urban planning, landscape architecture, interior design, construction, management consulting and health administration and operations management sectors, are key players in this specialized area of health care and special needs facility development.

Projects range from large, urban, acute care hospitals and medical campuses to residential group homes and supportive housing, and from multi-level care facilities for the aged and chronically ill to other special needs buildings.

Services

British Columbia can provide expertise for various stages of a health care or special needs facility development project, or on a "turn-key" basis spanning the entire "life cycle" of a project. Services include:

- health needs assessments;
- policy and program development;
- site assessment and planning;
- master planning;
- functional programming;
- program planning;
- block schematic design;
- equipment planning, procurement and installation;
- technology assessment, planning & training.
- detailed design development;
- engineering and construction;
- tender specification development;
- tender selection and award;
- project management;
- hospital commissioning;
- environmental solutions;
- operations management, staff recruitment and training; and

Products and Equipment

In addition, there are a number of companies that are designing and manufacturing furniture, cabinets, assistive devices, products and equipment for use in health facilities, care homes and seniors' residences.

Key Companies and Organizations

Private sector companies in British Columbia have substantial experience, both domestic and international, in the program planning, functional planning, architectural design, interior design, engineering and construction of large hospitals, other health facility projects and special needs housing developments.

The Gerontology Research Centre at Simon Fraser University has received international recognition for its applied research in aging and the built environment. The Dr. Tong Louie Living Laboratory is a research facility with a full-scale simulated residential space that is used to study different environmental designs and products for older adults and persons with disabilities. The Living Laboratory is a collaboration between the Gerontology Research Centre and the British Columbia Institute of Technology, Technology Centre. BCIT is Western Canada's leading technical institute. B.C. Research, a private research facility, has done extensive work in the area of architectural ergonomics.

Canadian Advanced Medical Services International (CAMS) provides expertise for the development and operation of health facilities. CAMS is a consortium of the five Vancouver teaching hospitals, the Capital Health Region (Victoria), and the University of British Columbia Faculty of Medicine. Collectively, the CAMS group of organizations represent the clinical and management expertise required to address the highly sophisticated continuum of teaching hospital care.

Subsectors

Subsectors in the industry include firms specializing in:

- architecture, landscape architecture and interior design;
- consulting and engineering; and
- furniture and equipment.

Business Description:

Architectura is a full service architectural firm providing services such as master planning, architecture, project/construction management, interior design, landscape architecture, and health care facility planning/programming. The firm provides architectural and planning services for all health care facility development, including tertiary, acute care, extended care, congregate, clinic, medical/retail, and laboratories.

Waisman Dewar Grout Carter Inc. has an interest in planning and designing health care facilities in the United States, Caribbean, Pacific Rim, and Europe. In addition, the firm was involved in the design and construction of a surgical centre in Washington, United States, design and construction of Belvedere Hospital and Gartnavel Hospital in Glasgow, U.K., and through the Federal Government and Pan American Health Organization (PAHO), assessed the entire health system and prepared the health system master plan for St. Lucia, and for Grenada (including the design of new large hospital). The firm has also designed a congregate apartment/hospital complex for seniors in LaJolla, California, United States.

Business Description:

Bradbury Architecture and Landscape Design specializes in health care facilities, special needs housing, heritage restoration, and landscape design. The company's health care experience involves a number of community care facilities and a 70 bed seniors centre.

Our firm is capable of providing architectural services for a wide range of projects from small upgrades to large new facilities. We are familiar with government requirements and have worked closely with BCHMC and CMHC as well as the Ministries of Health and Human Resources. We have successfully completed projects in municipalities throughout the Lower Mainland, the Sunshine Coast and Vancouver Island.

Our firm has done research on accessibility issues and has won awards in energy efficiency and heritage conservation.

Branches: Prince George, Qualicum Beach

Business Description:

CJP Architects was founded in 1954 and has grown to become one of British Columbia's most capable architectural firms. They are a complete architectural firm offering a full range of services in planning, architecture, and interior design. A great majority of the firm's completed projects are in the public sector, including schools, colleges, university facilities, government facilities at the local, provincial, and federal level, health care facilities, and facilities for recreation, culture and the arts. In the private sector, the company's specialties include corporate facilities, office renovation, and projects in the hospitality industry. The practice includes a full-service in-house interior design division, which allows clients a total comprehensive planning and design service, covering all aspects of a facility. The company maintains a staff of 63 and has a branch office in Prince George to serve the needs of northern B.C. clients and a branch office in Qualicum Beach to provide a base of operations for administration of Vancouver Island projects. The company's current production resources are among the most extensive and advanced of any architectural firm in British Columbia. CJP is a leader in CADD, and has the advanced capability to generate "3D" renderings from CAD drawings.

Tel: (604) 443-5021

Branches: Calgary, Vancouver

Business Description:

Founded in 1952 by J.H.Cook, FRAIC, Culham Pedersen Valentine Architects & Engineers Ltd celebrate over five decades of designing and administrating the construction of a wide variety of building types. This portfolio includes a significant number of health care, psychiatric care, seniors' care, educational facilities and penitentiary projects.

CPV provides professional services in urban design, architecture, space planning, interior design, and structural engineering from offices located in Vancouver, Invermere, Calgary, and Ottawa. CPV currently has a staff of 50 highly trained, experienced and committed people.

What differentiates CPV from our competition is the consistency of our team members. You can rely on our Partner in Charge, Ian Carter, to effectively lead our team, and to be accountable and available throughout the duration of your project.

Our firm's reputation has developed through relationships based on trust and partnership, communication and advanced technology, management and project delivery skills. Our reputation for design abilities has won us numerous awards from Provincial Architectural Institutes, the National Institute, the Lieutenant Governor, and many communities across the country.

We have worked with Facility Directors, Corrections Branch staff, Property Maintenance staff, B.C.B.C. Technical Advisors, and with various representatives of the B.C. Ministry of Health, Finance and Corporate Services.

We have considerable proven experience in health care facilities, including the B.C. Children's Hospital,

Company Profile

Surrey Hospital, B.C. Women's Hospital, Langley Memorial Hospital, Windermere District Hospital, MSA General Hospital, Nanaimo Regional General Hospital, Foothills Hospital, and Rockyview General Hospital, and various K-12 Schools. With this knowledge and experience of similar built types, we have developed an acute awareness of each of the stakeholders, and understand from "feedback" that we have met and in some cases exceeded their needs with our responsive cost-effective design approach.

Our team is very current in the latest health care technology, and planning, as well as the health delivery system's educational systems, and secure detention facility design, products and systems. We can bring our knowledge from projects in other jurisdictions to assist in understanding the needs of any facility type.

Our attitude towards change is to embrace it, which allows us to focus on providing innovative solutions with a value added emphasis, and not have any preconceived ideas.

CPV has an excellent reputation for innovative, value-added design. Our experience and research indicates that designers and users of facilities often re-use inefficient planning forms based on outdated models, incurring additional costs in materials and systems. We have identified issues and approaches that have a significant effect on achieving cost-effective, space-efficient, operationally functional and practical design and planning solutions.

CPV Architects has proven competence in the production of quality construction documents, which is critical to competitive tendering and cost control. We are also skilled in monitoring quality control during construction through our experienced and knowledgeable site administration service personnel.

CPV Architects is experienced in working with planning authorities, which offers our clients the security of knowing that we have experience and an understanding of the process.

We have successfully completed a number of master plans designs for health care facilities in British Columbia, Alberta, Ontario, the United States, West Africa, and the Caribbean, and as such are aware of the fundamental requirements of completing successful and effective programs. Ian is currently working on prospects in China, Costa Rica and Mexico.

CPV Architects is keenly aware of the concept of "Green Architecture" and therapeutic environments and consistently endeavors to use recyclable and non-toxic materials, and is committed to minimal maintenance and "life-cycle" costing.

Business Description:

Davidson Yuen Simpson Architects is a full service architectural firm providing consulting services to public and private sector clients. The company's work focuses on four areas: architecture, interior design, research, and urban and regional planning. A full range of architectural services includes design, documentation, consultant coordination and contract administration. The company is positioned to deliver these services on projects for cultural and recreational facilities, institutional work, particularly health care facilities, commercial developments, office buildings and multi-use complexes, and residential projects for both public and private sector builders. The company's complete interior design services are offered in all aspects of design, from conceptual design to final detailing, furniture selection and contract administration. These services are provided in the areas of commercial, retail, institutional and residential. The company conducts research investigation and detailed analytical studies, including site capability analyses, feasibility studies, funding assistance and approvals process, functional programming for office, residential and institutional projects, and investigation of specific building products and assemblies. In urban and regional planning, the company is involved in preparation of development strategy, plans and guidelines related to land planning, urban planning and design studies, and preparation of development and builders guidelines.

Business Description:

Downs/Archambault & Partners portfolio ranges from civic planning, office buildings, health care facilities, hotel and public entertainment areas, libraries, auditoria, theatres, and educational facilities, to museums, galleries, residential buildings, civic and community centres, heritage restoration, and social housing.

Having grown on a residential and institutional base, the firm has lasting concerns for architecturecural and planning solutions that satisfy the physical and emotional needs of the individual and their relationship to site and to nature. These concerns have led in recent years to large scale planning work, institutional commercial and residential projects.

The firm has received over 30 awards for buildings in various categories.

Business Description:

Originally established in 1979, by Darrel Jensen, the firm has grown in the past nineteen years to its present configuration as the Jensen Group Architects Inc. Since its inception, the firm has maintained a commitment to provide clients with design excellence and personal service. The result has been the successful completion of a wide range of building types and a number of design awards. From the firm's experience in the health care field, they have gained a thorough understanding of the challenges in the design and construction of facilities from all points of view, including those of the regulatory and financing authorities as well as proponent groups and users. This experience has assisted in creating design solutions which prevent future operating problems and maximise flexibility for future change and expansion.

The company has undertaken the design of a number of special adult multi-level facilities including the Priory, a 75 bed multi-level care facility and adult day care for the Capital Health Region. Other completed projects include design and construction of health care facilities, adult day care centres, diagnostic and treatment facilities and ambulance stations.

Jensen Group Architects Inc. is author of "Draft Multilevel Care Design Guidelines" prepared for the B.C. Ministry of Health. The company also has contemporary knowledge and ideas generated from the National Alzheimer's Design Assistance Workshop, sponsored by the Institute on Aging and Environment.

Business Description:

Kasian Kennedy was formed in 1997 through the merger of the Kasian Kennedy Design Partnership and Poon Garnder Garrett/Architects & Planners, creating a full service integrated practice of architecture, interior design and planning with special expertise in health care and educational architecture. The company has offices with 40 full time staff in Vancouver and 40 full time staff in Edmonton. Kasian Kennedy is committed to using the most current technology in resolving the needs of our clients and in producing facilities that reflect close participation by the client throughout the design and construction process, and which represent the best possible value for money. Our specialization in health care architecture began in 1945 and ongoing health care architecture teams have completed more than 300 hospital projects. Major work includes planning and design of large and comprehensive health care centres such as B.C. Children's Hospital, B.C. Women's Hospital (formerly Grace/Children's Hospital), Powell River General Hospital, Dawson Creek and District Hospital and the Thompson Centre for Long Term Care and Rehabilitation in Whitehorse. Current work includes a \$65 million redevelopment of Royal Jubilee Hospital, Victoria, B.C. The company has a thorough understanding of the factors involved in health care renovation projects and the implications arising from the requirement for ongoing operation during construction.

Kasian Kennedy or its predecessor firms have completed projects in India, Bangladesh, Fiji, Mexico, New Zealand and the U.K. (via a former branch office in London, England). Its most recent offshore project was a \$13.5 million expansion/redevelopment of the Canadian High Commission, New Delhi, India for the Federal

Business Description:

Neale Staniszks Doll Adams Architects is a full service architectural firm based in Vancouver. Established in 1976, the medium-sized practice was founded on the principles of personalized service to our clients, a cooperative teamwork approach, a commitment to quality and to the effective delivery of our clients' projects. The firm has grown to a staff of twenty-one, comprising ten registered architects, six graduate architects and technologists and five support staff. Neale Staniszks Doll Adams Architects has developed an expertise in the design of seniors and special needs housing, long term care facilities, hospice, Alzheimer's and special care units and community health centres.

The firm is responsible for the introduction of the innovative home concept in British Columbia in the early 1990's. The home concept constitutes a significant departure from the institutionalized model that has traditionally governed healthcare design and in which one typically finds double-loaded resident wings with centralized dining, lounges and activity areas. In contrast, the home concept rests on a decentralized model and attempts to create several self-contained households or homes, each accommodating a small group of residents in a manner more in keeping with an extended family arrangement. Rather than locating daily activities such as eating, bathing and socializing in large and centralized spaces, each home has its own kitchen, bathing room, dining and living area, permitting residents to experience daily living among familiar faces in an emotionally supportive environment.

Company Profile

NSDA recognizes that the care of the frail elderly is a field that is constantly evolving. As such, we are involved in ongoing research into the design of seniors housing, long term care facilities and health centres, attending conferences and visiting leading edge facilities throughout Canada and the United States. NSDA is responsible for the introduction of many innovative design features for the frail elderly. Their healthcare work has been published both nationally and internationally and has been honoured with numerous awards, including the 1999, 1998 and 1995 Lieutenant Governor's Award of Merit, the 1998 Canadian Wood Council Merit Award, and the 1990 Lieutenant Governor's Medal Award of Excellence.

Active Geographic Market(s):

Recent Project(s):

- Name:** Lytton Health and Healing Centre, Lytton, B.C.
Description: The first hospital of its kind in B.C. where conventional health care will be integrated with traditional aboriginal health and healing concepts. The new centre will provide acute care, multilevel care, emergency, diagnostic and treatment services, community health services and traditional native healing.
- Name:** Dr. Peter Centre Hospice, Vancouver
Description: Funding has been announced for a joint venture project between the Dr. Peter AIDS Foundation, the Vancouver Richmond Health Board and the BC Housing Management Commission, for a new free-standing hospice and day centre for persons suffering from HIV/AIDS. Interim measures were taken and 2 renovations to existing space within St. Paul's Hospital (also a Centre of Excellence in HIV/AIDS), occurred in 1997 and 1998. The first was the development of a day centre and the second a 10-bed hospice in order to provide assistance to the growing number of people suffering from the disease.
- Name:** South Similkameen Health Centre, Keremeos
Description: Replacement of the existing Keremeos Diagnostic and Treatment Centre that will consolidate existing allied health agencies as well as a new multilevel care facility onto one site.
- Name:** Southview Terrace, Vancouver
Description: This project is the first phase of a redevelopment program and consists of 57 seniors supportive housing units. The project will eventually integrate supportive housing with long term care and health services on the same site.
- Name:** Hollyburn House, West Vancouver
Description: This is a seniors housing and care facility located close to public amenities and a park. The project offers a range of living options, from 66 self-contained retirement residences accommodating seniors congregate living, to a 36 bed intermediate care centre for those needing assistance with their daily activities.

Company Profile

Name: Central City Lodge, Vancouver

Description: Replacement facility for the Central City Mission, an inner-city care home which has served the disadvantaged in Vancouver for over 80 years. Design challenges included issues related to urban design, a restrictive downtown site, a complicated building programme and a limited budget. Received the 1994 City of Vancouver Heritage Award and the 1995 Lieutenant Governor's Award of Merit.

Name: Kiwanis Care Centre, North Vancouver

Description: A 192 bed multilevel care facility designed for the North Vancouver Kiwanis Care Homes Society. Located on 4.1 acres of land, the facility is made up of 5 homes each with its own living, dining and activity rooms, fireplace lounges, bathing facilities and nursing care centres. Received the 1998 District of North Vancouver Award of Excellence.

Name: Buchanan Lodge, Vancouver, B.C.

Description: Development of a 110 bed multilevel care facility based on the design aspects of the turn of the century house which had been a home for the elderly for over 50 years. Received the 1999 Lieutenant Governor's Award of Merit and the 1998 Canadian Wood Council Merit Award.

Name: Villa Capital, East Vancouver

Description: This 84 bed multilevel care facility is the first institutional care facility in B.C. to use the "home concept" in its design. This concept focuses around decentralizing the facility into several small self-contained units (12-14 residents) in a manner similar to an extended family arrangement. Received the 1998 Lieutenant Governor's Award of Merit.

Business Description:

Nielsen Design is a firm specializing in the development and design of seniors' housing and health care projects. The firm provides design services in architecture, urban design, space planning and interior design and practices in the fields of multifamily housing, health care facilities and commercial buildings.

In 1990, due to the illness of Garry Nielsen (multiple sclerosis), Bev Nielsen assumed the responsibility for both Nielsen Design and Nielsen Architect as well as the responsibility as a care giver. With this personal experience, she has developed an extensive awareness and knowledge of the issues related to accessibility, as well as the need for adaptability in multifamily housing. This knowledge and experience has been successfully applied in the area of design for seniors' housing and multilevel care facilities.

Nielsen Design Consultants Ltd. is dedicated to the creation of non-institutional housing environments for seniors and persons with disabilities that promote independence, self determination and improve the quality of life.

Active Geographic Market(s):

British Columbia

Recent Project(s):

Name: Zajac Norgate House, North Vancouver, B.C.

Description: A 36 unit housing development for seniors and disabled persons. This supportive housing project provides adaptable and barrier free housing units for the frail elderly and person with disabilities with community home care, and recreational services provided

Company Profile

by the North Shore Health Authority.

The project is a non-profit development rented at cost to seniors. It also accommodates several individuals with mobility, hearing and visual limitations as well as persons with degenerative diseases such as multiple sclerosis, who might otherwise be institutionalized. The project provides home care through the provincial Continuing Care Program to allow qualified tenants to pool their home care hours. Also, the project management and North Shore Health Region provide social and recreation activities.

Design Features

In 1997, Norgate House won the CMHC Flexhousing Award for B.C. and Yukon region for the innovative features which allow each suite to adapt to the changing needs and abilities of its residents. All units provide ample maneuvering space in the entry, kitchen, bedroom, closet and bathroom. Adjustable kitchen cabinets and counters enable all units to accommodate the needs of both the non-disabled and the disabled. 1998

Name: William Rudd House, New Westminster, B.C.

Description: 12 bed extended care home for young persons with physical disabilities.

This pilot project's design successfully integrated Ministry of Health's multilevel care guidelines into a 12 bedroom home for extended care level residents. The goals of William Rudd House were to improve the quality of life and to promote independence and self determination for a group younger individuals who may otherwise need to live in a larger institutional environment.

The project was developed in 1994 for Pacific Health Care Society which is now under the Simon Fraser Health Region.

Name: Rotary Manor, Dawson Creek, B.C.

Description: 44 bed multilevel care facility with 30 units of seniors' supportive housing. 1999

Name: Cariboo Lodge, Williams Lake, B.C.

Description: Interior design for a new 10 bed, special care unit in this long term care facility. 1994

Business Description:

Penner & Associates combines full service interior design with environmental research and consulting. The company integrates social and environmental responsibility in every project, considering occupant health and comfort energy and resource efficiency, indoor air and light quality, adaptability and accessibility. With over 20 years of combined experience, Shelley Penner and Robin McIntosh design environments that respond to the psychological, social and physical needs of people. Design services cover new construction and renovation of commercial, institutional and residential projects.

The company believes in a team approach with clients, building occupants, consultants and contractors, and encourages the development and realization of our clients' vision while creating timeless interiors that are beautiful, functional and affordable.

Elements found in nature are a constant source of inspiration in the design aesthetic. The site and architecture also form part of the design influence and the company strives for a seamless transition from exterior to interior.

Penner & Associates offer a full range of interior design services, including programming, preliminary design, presentation drawings, design development, documentation, tendering and project coordination. Budgeting and scheduling are essential elements which are established at the outset and refined as the project progresses through each phase. Working toward a closed loop philosophy, the company considers initial, operating and lifecycle costs.

Penner & Associates emphasizes a multi-disciplinary and participatory approach and enlists the requisite expertise on a per project basis. They have extensive access to suppliers of building materials, products and systems. Technical resources include computerized drafting, electronic transfer of information and drawings,

Recent Project(s):

Name: Gilmore Gardens, Richmond, B.C.

Description: This 8,400 m², 4 storey, 118 unit senior's residential facility was opened in June , 1999. It is a residential care facility designed to allow for "aging in place." The building's X-shape helps minimize the visual impact of the facility on neighboring homes in this predominately single family residential neighborhood.

The X-shaped design also allows for ample access to morning or evening light depending on the resident's personal preference. This design divides the four seasonal

Company Profile

gardens, so that at least one of them is in bloom throughout the year. The gardens are shared with the adjacent church for residential and church use. In addition to the gardens, the facility shares a 150 stall underground parkade with the church.

The facility features both one and two-bedroom units, many of which are equipped with two full bathrooms. The units also feature in-suite storage areas to allow for personal storage of each resident's possessions.

The facility includes amenities such as, parking for motorized scooters and wheelchairs, easy access to public transit and proximity to medical and hospital facilities. In addition a large area is devoted to a common dining room and commercial kitchen. A well appointed private dining room and lounge area allows residents to visit with friends and a larger number of relatives in a more intimate atmosphere.

Recent Project(s):

Name: Taylor Manor, Vancouver, B.C.

Description: This replacement project of a 72 bed facility is planned with four self contained pods of 18 residents, each with an internal wandering loop, access to secure outdoor space and dining/lounge space. The environment is planned in a residential heritage style to reflect the existing Class B heritage building on the site currently being used as a long term care facility.

Budget: \$10 Million

Company Profile

Name: Normanna Care Home, Burnaby, B.C.

Description: This 100 bed multi-level care home is a joint venture with MCMP. The project comprises 5 self-contained pods with the ability for the pods to either shrink in size or share components of another pod to increase its size and operational efficiency. The building design is responsive to the surrounding single family neighbourhood and reflects a Norwegian character. On the same site is a 1912 single family home which was the first Mayor of Burnaby's home and which will be restored and used as a home for the volunteers, a maintenance office and workshop.

Budget: \$13 Million

Name: Inglewood Care, West Vancouver, B.C.

Description: 92 bed private multi-level care home, designed and built in 4 phases to replace an existing private hospital with two self contained special care units of 20 beds each.

Budget: \$6 Million

Name: Echo Village Care Home, Port Alberni, B.C.

Description: A new 64 bed home planned in three wings with common dining and support space. One wing is planned as a self contained cluster.

Budget: \$4 Million

Name: Deltaview Habitation Centre, Ladner, B.C.

Description: Purpose built 80 bed Alzheimers home modelled after the Corrine Dolan Center in Ohio. Planned in two 40 bed clusters, each with the ability to be subdivided into 20 beds. An adult daycare was designed as an integrated component of the facility.

Budget: \$6 Million

Business Description:

Canadian Advanced Medical Services International (CAMSI) provides expertise for the development and operation of health care facilities. CAMSI is a consortium of the five Vancouver teaching hospitals, the Capital Health Region and the University of British Columbia Faculty of Medicine. Collectively, the CAMSI group of organizations represent the clinical and management expertise capacity required to address the highly sophisticated continuum of teaching hospital care.

At present, the CAMSI partners have responsibility for 2000 beds in 10 acute care hospitals with operating costs in excess of \$1 billion annually. One of the most recently developed facilities is comprised of 39,953 square meters organized as two, six-story nursing towers adjoining a three-story diagnostic and treatment (D & T) building with a glazed public concourse. The hospital has been recognized in Canada as one of the most cost effective hospital construction projects to have been completed during a period of 10% annual inflation.

More recently, staff have been involved in the development of plans and tender specifications for a \$112 million redevelopment project of a diagnostic and treatment center as well as a 75 bed rehabilitation facility which have taken into account contemporary principles of hospital design and operation.

Business Description:

The Gerontology Research Centre was established in 1982. The Centre is associated with Simon Fraser University's Gerontology programs, which were established in 1983.

The Gerontology Research Centre has an international reputation for applied research in 5 areas:

- Aging and the Built Environment--research, planning, design, development and evaluation of housing, care facilities, community environments and enabling technology.
- Health Promotion and Aging--examination of determinants and consequences of population health, and to assist seniors in improving their mental and physical health, cope with chronic illness, and prevent disability.
- Prevention of Victimization and Exploitation of Older Persons.
- Changing Demography and Lifestyles.
- Older Adult Education.

Credit, non-credit and custom courses on adult development and aging, environmental design and health promotion are all available.

The Gerontology Research Centre has a formal affiliation agreement with the Technology Centre at the BC Institute of Technology. Together they own and operate the Dr. Tong Louie Living Laboratory, a full-scale simulated residence for research on environmental design and assistive technology for the elderly and adults with disabilities.

The Gerontology Research Centre staff are in demand to speak and consult internationally on topics related to facility design, development and operation. Publications are also sold abroad.

The International Association of Gerontology's 17th World Congress will be held in Vancouver in 2001, the

Keen Engineering is one of Canada's largest, well established consulting mechanical engineering firms, specializing in the design of HVAC, plumbing, fire protection, and energy management systems for buildings. Keen Engineering has been involved in the design of health care facilities for over 35 years in the provinces of British Columbia, Alberta and Ontario, and has designed many new health care centres, including major hospital, treatment centres, seniors care homes, and private health care facilities. We also design renovations and additions to health care buildings. Health care projects of note include MSA Hospital in B.C., Royal Alexandra Hospital in Alberta and Kings Health Centre in Ontario.

Keen Engineering is currently working with the B.C. Ministry of Health and the Alberta Ministry of Health on numerous health care projects. The company is involved in international projects in Kuwait, Australia, New Zealand, the United States, and Mexico, and continues to pursue work in other parts of the world.

Recent Project(s):

- Name:** Vancouver-Richmond Health Board, B.C.
Description: Redesign processes to provide a coordinated pharmacy service to acute care, extended care and community agencies in Vancouver within a regional context.
- Name:** Simcoe County Hospitals, Ontario
Description: Engaged by 6 Hospitals (5 acute and 1 Mental Health) to identify the optimal service configuration to serve the large geographic area of Simcoe County, which is one of the fastest growing areas in Ontario.
- Name:** Renfrew County District Health Council, Ontario
Description: Restructuring of four small rural hospitals along with several municipal homes for the aged and other nursing homes. Unique new service delivery models will be developed that are appropriate for the district of approximately 100,000 persons in a geographic area of 7,600 square kilometers.
- Name:** Prince Albert Health District, Saskatchewan
Description: Review and redesign the community services of the Prince Albert Health District, with the view of better integrating the community services across the health district. This included the design of a process that would facilitate a reorganization along population services delivery lines, using population-specific, multi-disciplinary teams.
- Name:** Grey-Bruce District Health Council, Ontario
Description: Health and Hospital System Restructuring project centered around the configuration of 12 rural hospitals (10 corporations) servicing a resident population of 110,000. The proposed model included a single governance structure and administration along with creation of primary care facilities.
- Name:** East Prince Health Region, Province of P.E.I.
Description: East Prince Health, one of the two larger regions in PEI, had re-organized structurally along population health lines, but continued to provide healthcare from the Prince County Hospital. The decision to replace this aging facility provided the opportunity to create a more integrated delivery system, using the functional program process as a guide. A process was required to carry out the design and decision-making needed to identify the optimal level of integration of space and service delivery.

Company Profile

Name: Carleton Place and District Hospital, Ontario

Description: Located in a bedroom community of Ottawa, the development of a strategic plan for this hospital is the first phase of a pending redevelopment project for the hospital.

Business Description:

The Neil Squire Foundation is a Canadian non-profit organization whose purpose is to create opportunities for independence for individuals with significant disabilities. Through direct interaction with these individuals we research, develop and deliver appropriate innovative services and technology to meet their needs.

We provide consultative services for high level quadriplegics, computer training and assist with video production.

Current products include a health inventory of persons with severe physical disabilities in our creative employment options program, consultation and assessment services, and an adapted work employment ability index that incorporates health measures.

Recent Project(s):

Name: Royal Bank of Canada

Description: Proposals have been submitted to the Royal Bank Leveraging Diversity Council to provide services that include work-site modification, computer technology adaptations, and ergonomic assessments as part of the Royal Bank's employment equity initiatives.

This developed out of initiatives that were initially taken at the Burnaby branch and then expanded to included the lower mainland region of B.C. (Greater Vancouver).

Company Profile

The goal of this partnership with the Royal Bank is to develop and sustain an environment at the Royal Bank that is inclusive to persons with physical disabilities. The Royal Bank has made a commitment to expand the program beyond the lower mainland region of B.C.

Name: Creative Employment Options

Description: The Neil Squire Foundation provides training to facilitate persons with significant physical disabilities joining the workforce. This pre-employment training program focuses on providing the skills needed to participate in meaningful employment.

Name: Computer Access Devices

Description: The R&D team at the Neil Squire Foundations has developed many computer access devices that allow persons with varying levels of physical disability to operate computers. Presently, research is focused on Brain Computer Interfaces, which would allow persons with high-level spinal-cord injury to control devices such as wheelchairs, robotic assistive appliances, computers and neural prostheses. The ultimate goal of this interface would be effective and sophisticated control of these various devices.

The foundation has done work with Speech Assisted Reading and Writing (SARAW) and Speech Assisted Math (SAM) programs. These programs have been developed in a DOS environment and a Windows versions of SARAW is in beta testing. A French version of the SARAW software is also being developed, with an expected release in the summer of 2000.

Business Description:

RPG - Resource Planning Group Inc. / The RPG Partnership are Canadian-owned firms providing specialized consulting services to the healthcare industry. RPG offers services in healthcare needs analysis and service planning, site selection and master planning, facilities programming, medical planning, facilities design consultation, facilities commissioning, facilities management, and related special services. The firm maintains offices in Vancouver and Toronto. RPG has conducted over 800 healthcare projects for 200 clients in Canada, the United States, and off-shore. These projects have varied in type and scale, ranging from regional health service planning to the layout and equipping of specialized rooms in facilities.

In 1999, RPG merged its business with the APRA Group Inc. bringing together the two leading facility planning consultant firms in Western Canada. With the combined resources of the two firms, RPG will continue to provide unparalleled pre-design planning and programming services for a wide variety of building types, with special expertise in health care, post secondary education, library, laboratory, criminal justice and public safety projects.

The international experience of RPG includes assignments in the Middle East, Southeast Asia and the United States.

The firm recently completed participating with Arthur Erickson Atelier in the development of a master plan

Company Profile

of a 1,700 acre site for a new education city known as Bandar Sinar Ilmu (City of Shining Knowledge) in Melaka, Malaysia. The city is to accommodate a wide range of private post secondary institutions with a focus on the health sciences. The firm also recently consummated a partnership with Equipment Planning Associates Ltd. of Toronto, Ontario, offering our international clients the resources of both firms from our offices in Vancouver with comprehensive services in equipment planning, procurement and commissioning under the name of Equipment Planning Associates/Pacific.

Branches: North Vancouver

Business Description:

Country Roots was created by Dan Carriere, who has been in the furniture business for 27 years. Dan started by selling antiques and, when they were not readily available, started producing reproductions of highly sought after antiques. Country Roots began on Bowen Island, which is a great place to get the creative juices going and come up with wonderful designs for furniture conscious clients. Country Roots have offered you essential pieces of furniture for every home, with several styles that add warmth and comfort to any home: Shaker, Amish, Mission, Harvest Forge, Riel (French country), Doukhobor, Farmhouse and Canadian Heritage. These pieces have been crafted to insure that all design details have been met. Designers have enjoyed the freshness of the product offering and have displayed them in model suits at Whistler, British Columbia, Street of Dreams and private residential homes. Country Roots recently completed a 32-room chateau in France and have been commissioned to make furniture for several high profile condominiums in Whistler B.C. and healthcare facilities in Victoria.

Country Roots purchased Canadian Heritage Design in 1998. The factory was established 18 years ago and has doubled the company's sales after two years. Country Roots employs 20 craftsmen and utilises 4 other factories for contract projects. All design and project management is under the owners supervision.

Country Roots invites you to enjoy the art of country living by purchasing several pieces of our country collections. Country Roots will be designing several new pieces to add to the collections.

Business Description:

Michael Peterson and I are recent graduates of the Wood Products Design Program at Kootenay School of the Arts. One of the projects during the last term was to design chairs and tables for a senior's home opening nearby. Special consideration was given to seat height and angle, upholstery, armrest height, and handholds to help sit down into the chair and stand up from the chair. All sharp corners are eliminated and the back is at a convenient height to use as a handhold. The chairs are stackable and built out of local woods. Intended use is dining and games areas in seniors housing and long term care facilities.

Business Description:

The company manufactures Farabloc material. Farabloc is a drug free system which relieves the pain of arthritis, muscle tension, phantom limb pain, etc. The product is available as a "blanket" in various sizes.

Farabloc was originally invented to combat intermittent phantom limb pain as experienced by amputees. Farabloc looks and feels like linen and contains extremely thin steel fibers. Farabloc through its shielding effect protects damaged nerve endings. It stimulates blood circulation and may produce a pleasant feeling of warmth, relaxation and calming effect. It also aids muscle relaxation and can also be applied for muscle strain.

Business Description:

Garaventa (Canada) Ltd. is a large international manufacturing and marketing operation with 130 employees and a global network of more than 100 dealer partners. Innovative accessibility products include the Stair-Lift, the first wheelchair platform lift in North America able to travel along turning stairways, the Genesis vertical platform lift, Stair-Trac and Stair-Porter, two portable battery-powered stair climbers, and the Evacu-Trac, an emergency evacuation device.

To meet the accessibility challenges of the future, our certified team of designers, technicians, and engineers are continually upgrading their skills. By staying at the forefront of technology, Garaventa brings you the best possible accessibility products available today. Endorsed by designers, architects, and facility planners, Garaventa has designed products to meet the most challenging access situations and develop innovative solutions for homes, schools, places of worship, offices, hotels, airports, subways, and a wide range of public and private buildings around the world.

The Canadian operation initially focused on mountain aerial tramways -- completing Vancouver's Grouse Mountain Superskyride in 1976 -- and successfully diversified into the design and manufacture of inclined platform lifts.

Pos Title: President

E-Mail:

Tel: (604) 792-1450

Branches: Chilliwack

Business Description:

Medinorm Ergonomic Kitchens was established in 1969 primarily as a construction company. The company became interested in the challenges of daily living in the home and in 1984 developed height adjustable and adaptable kitchen and bathroom systems for physically challenged people. These systems have been adopted in aging in place housing and care facilities as well as for addressing the needs of those people with physical limitations resulting from illness or injury.

Medinorm manufactures complete kitchens to suite individual needs, which come completely supplied with a suitable sink, faucet and countertops. They carry several sinks, specifically designed for the physically challenged, e.g. double and single bowed and a sink with two sloped sides for those with lifting difficulties. The main products are height adjustable and adaptable kitchens and vanities.

Historically, sales activities have been mainly in Canada, though they have also exported to Japan and Singapore and are looking at other Asian, U.S. and European markets. The company would be interested in establishing a joint venture for research and development on products for daily living for the physically challenged. At present they have several products in mind.

Medinorm's ergonomic kitchens have been installed at a variety of institutions and private residences. Some of our institutional clients have included: Norgate House, North Vancouver, B.C.; National University Hospital, Singapore; Crossreach Residential Daycare for Seniors, Vancouver, B.C.; and Queens Park Hospital, New Westminster, B.C. These institutions use our kitchens for a range of purposes from rehabilitation and evaluation to an aid for daily living.

Business Description:

ProBed Medical Technologies Inc. is a privately owned B.C. business that has developed a computer controlled turning bed with various models for home and institutional use. The Freedom Bed is a computer controlled, laterally rotating bed designed to meet the needs of those patients with, or at risk of developing, pressure sores and other complications of immobility. The beds are manufactured in Abbotsford, B.C..

Given the cost of hospital care for patients needing constant attention, the purchase of these beds is a very cost effective alternative to reducing human pain and suffering. Other advantages include saving nurses and care givers from potential back problems resulting from lifting patients.

To date the majority of sales have been made to home care locations. The company is currently completing its new model that will be targeted at hospitals and nursing facilities as well as home care. The new model is a fully featured Freedom Bed with enhanced computing and control features as well as a head and leg raising system that had not been available on previous models.

The company recently completed its first Freedom Bed shipment to a Japanese construction company involved in building specialty homes and facilities for the aged and disabled. Many such companies are getting involved in the "turn key" approach to care facility development and it is anticipated that there will be additional sales to this and similar purchasers involved in this industry.

Business Description:

Sarita Furniture has been supplying quality furniture since 1987. Sarita's primary focus is the manufacture of outdoor furniture made of western red cedar. This wood is internationally acclaimed for its stability and weather resistance. Sarita has two main lines of furniture that has been used in commercial landscape design for over 10 years.

This outdoor furniture has been used in therapeutic gardens at various health care facilities, including the Lodge at Broadmead, Victoria, B.C.

Sarita has been exporting furniture to Western Europe since 1989 and has done container shipments to Japan and England.

The company has been certified by Smartwood under the Forest Stewardship Council (FSC), as a "chain of custody" processor. Sarita products that are made of certified wood are recognized as coming from well-managed forests adhering to strict environmental and socioeconomic standards in accordance with the principles and criteria of the Forest Stewardship Council.

Branches: Questek - West Ryde, Australia, Victoria

Business Description:

Vigil Health Management's innovative hardware and software solution monitors and develops care plans for dementia sufferers within long-term care facilities. The Vigil Integrated Care Management System is designed to improve the quality of care and quality of life of residents while increasing staff efficiencies and reducing operating costs.

Vigil is a computerized monitoring system that improves the quality of life of dementia sufferers. Vigil monitors patient welfare, protects them from wandering into danger and frees staff from constant rounds.

Vigil's software, developed with the help of dementia care experts, enables caregivers to customize a monitoring environment for each resident that is unobtrusive and effective.

Vigil is designed primarily to determine if residents are in potentially harmful situations when they are in their rooms. This is done by linking a series of sensors around the resident's room to a central computer and pager system.

The Vigil system is being used in over 35 nursing homes in Australia. It can be scaled to various sizes to accommodate different facilities.
